

DriveMate

Concept Proposal / Open static prototype

A multi-agent, multimodal mobility and vehicle-status assistant for commuters, families, and long-distance drivers.

DriveMate: Scenarios, Safety, and VLA Roadmap

All vehicle, map, weather, calendar, vision, and charging capabilities are proposed scope - not integrated APIs or models.

SCENARIO 01

Heavy Rain & Flooding

Combine weather, route, and range. Do not assess water depth or instruct driving through water.

SCENARIO 02

Family Road Trip

Work backward from lunch, passenger breaks, and charging alternatives to a departure plan.

SCENARIO 03

Abnormal Tire Pressure

Pause trip planning and prioritize safe inspection and professional service options.

SAFETY BOUNDARY

- No high-risk vehicle control; confirm key actions
- Separate facts, stale data, and model inference
- Prioritize safe inspection or professional support
- State information gaps instead of inventing facts

PLANNED EVALUATION • NOT RESULTS

Task completion

Tool-call accuracy

Factual consistency

Confirmation count

Response time

User satisfaction

High-risk error rate

These are proposed concept metrics, not deployed-product results.

Static low-fidelity interface

VEHICLE & CONTEXT

Battery 68% · sample

Weather: heavy rain · sample

Tire pressure: normal · sample

Heavy Rain & Flooding • Airport Pickup

Leave 25 minutes early · prefer elevated roads · retain 20% range

High risk: cannot assess water depth; recommend rerouting only.

Confirm reminder draft • static demo

Physical AI / VLA staged roadmap

0 CURRENT

Static concept and synthetic scenarios

1 READ-ONLY

Authorized vehicle data and tool evaluation

2 MULTIMODAL

Offline vision-language risk evaluation

3 CONTROLLED

Closed setting, low risk, human confirmation
